

Merlinus Liberatus.

BEING AN

ALMANACK

For the Year of our Redemption,

1778,

Being the Second after *Bissexile*, or *Leap Year*;
And from the Creation of the World, according
to the best History, 5725,

And the 89th of our Deliverance by *K. William*,
from Popery, and Arbitrary Government;

But the 83d from the

Horrid, Popish, High-Church, Jacobite Plot.

Wherein is contained all Things fitting and useful for such a Work, as
an Ephemeris of the daily Motions of the Planets, with their various
Configurations, Aspects, Conjunctions, Lunations, Eclipses, Astrono-
mical, Astrological, Meteorological Observations, the Rising and Setting
of the Sun, Moon, Planets, and fixed Stars, illustrated with Tables of
the Tides, Terms, and daily Equation of Clocks, Length and Break,
Increase and Decrease of Days, Semidiurnal and Seminocturnal Arches
for several Latitudes, a Chronology, Remarks on the Divisions of the
Heavens, with Judgments of the Eclipses, and also a particular Judg-
ment of a Nativity, handled according to the Rules of the Ptole-
mean Astrology, with many other Things relating to the Truth of
Astrology.

Calculated for the Meridian of *London*,

Whose { Longitude } is { 24 } Degrees { 20 } Minutes.
 { Latitude } { 51 } { 32 }

By JOHN PARTRIDGE.

Etiam Mortuus loquitur.

L O N D O N:

Printed for the Company of STATIONERS.
And Sold by GEORGE HAWKINS, at their HALL in
LUDGATE-STREET.

[Price Stitched Eight Pence.]

J. Hamersley del.

A FURTHER CONTINUATION FROM MY LAST.

BUT say some, you cannot tell the weather truly, how much less then can you be able to foretel human fates? Now the truth is, we do acknowledge, that it is but little that we acknowledge perfectly; and as for skill in the weather, we count it a great deal more ticklish to be understood, (especially some years before the time) than human busineses. For, first, we have but little of any nativity to judge therein, (the vernal and other quarter figures being the principal rules of that nature) the Transits are our greatest arguments. And 2, the weather depending much upon the airy operations, is swayed by meaner aspects than are human matters, and therefore is by so much the more of various and uncertain events. Also 3, Unless it were possible to understand the exact quantity and proportion of weather, whether fair or foul that is like to fall, and to say expressly in what special climate and place it shall begin to fall, it is utterly impossible to please all people, in all places, with any predictions of this nature; for should it be prognosticated of rain, and that rain come, yet if the stock of showery drops any whit fail of the due proportion expected, and begin to pour down four or five climates breadth of space ere it arrive at the place of expectation, then will that whole cloud be utterly expended upon those climates where it first dropped, and a fair day must needs succeed in the expected situation. And thus the prognosticator, though never so ingenious, for want of some drams of perfection in some certain predictions, shall be whooped at by a company of clowns, as if he were a mere impostor. Besides, the winds are exceeding ticklish in turning here and there, so as who can perfectly know them; and yet the failure of the least skill in the turn of the winds, turns off a glut of rain or snow a quite contrary way. And lastly, (which is not the least of the impediments unto a truer attainment in meteorology) is the want of the writer's encouragement either by recompence of reward from the Company of Buyers, who

who are the enjoyers of them on the one side, they are not so much for an elaborate as a cheap Almanack, for one they can get by, rather than to have thanks for: And on the other side, these are so fordid that never once considering the ingenuity of the author, if they find him but once or twice in a day or two's error of the weather, he must ever be accounted with them for a liar. So that these things considered, what encouragement has any man (think we) to spend two or three months study upon writing of the weather? Whence comes it to pass that few write who have skill; and, secondly many who have skill, yet write according to their encouragement rather than skill, more slightly than warily. But yet, that there is a real skill in fore-knowledge of the weather, and of the turning of the winds too, as to gluts of weather or wind, and as to the succession of weathers, whosoever shall peruse Mr. Gadbury's or Swallow's former predictions to that purpose, will say as much. But besides were it so, that weather could not be any thing near certainly predicted, yet that there is a real skill in it in part, almost every shepherd and husbandman can tell you, who are able to verify abundance of aphorisms of their trite experiences concerning weather, both by the riding of the clouds, colour of the skies, and looks of the sun, moon, and stars. And that they are certainly in the right on't as to these their experiments, our Saviour brings in his sacred text, instancing in certain of these particulars, that it is so, as they use to say. And now be it so, that observation and experience can make us weather-wise, what shall hinder, but that they may say as much as to the fore knowledge of our own fates if not a great deal more, there being abundantly more reason for certainty in predictions of this nature, than those of that nature. What is Astrology, but the finding out a skill of future fates, by the very same means as the Jews attained to know, that a red evening boded the morrow's fair weather.

A Table of the Moon's Age for every Day throughout this present Year 1778. Whereby, with the Help of the next general Tide-Table, the Time of High Water at all the Places above-mentioned in it, are shewn by Inspection.

An Explanation of this and the following Table.

First find the Month in the Head of the Table, and the Day in the first Column on the left Hand, and in the Angle of Meeting you have the Day of the Moon's Age, with which enter the following Table, and find your said Number in the left Hand Column, and over against it in the other Columns is the Time of High Water at all the Places above-mentioned, by Inspection.

Example. January the 9th, I find the Moon to be 11 Days old, and over-against 11 in the first Col. I find 11 Hours 48 Min. in the second Col. 10h. 18' in the third, which is the Time of High Water at all those Places mentioned above in the 2d and 3d Columns. *Et sic de cæteris.*

A Table of Terms and Returns, for the Year of our Lord 1778.

Hilary Term begins Jan. 23, ends Feb. 12.

Returns or Effluen Days.		Exc.	Ret.	App.	W. D.
In eight Days of St. Hilary,	Jan. 20	21	22	23	Friday
From the Day of St. Hilary in 15 Days,	27	28	29	30	Friday
On the Morrow of Purif. of bl. V. Mary, Feb.	3	4	5	6	Friday
In eight Days of the Purif. of bl. V. Mary,	9	10	11	12	Thursday

Easter Term begins May 6, ends June 1.

From the Day of Easter in 15 Days,	May 3	4	5	6	Wednesday
From the Day of Easter in 3 Weeks,	10	11	12	13	Wednesday
From the Day of Easter in 1 Month,	17	18	19	20	Wednesday
From the Day of Easter in 5 Weeks,	24	25	26	27	Wednesday
On the Morrow of the Ascension,	29	30	31	1	Monday

Trinity Term begins June 19, ends July 8.

On the Morrow of the holy Trinity,	June 15	16	17	19	Friday
In eight Days of the holy Trinity,	21	22	23	24	Wednesday
From the Day of the holy Trinity in 15 Days,	28	29	30	July 1	Wednesday
From the Day of the holy Trinity in 3 Weeks,	July 5	6	7	8	Wednesday

Michaelmas Term begins Nov. 6, ends Nov. 28.

On the Morrow of All Souls,	Nov. 3	4	5	6	Friday
On the Morrow of St. Martin,	12	13	14	16	Monday
In eight Days of St. Martin,	18	19	20	21	Saturday
From the Day of St. Martin, in fifteen Days	25	26	27	28	Saturday

N. B. No Sitzings in Westminster-Hall on Ascension-Day, Midsummer-Day, and the 2d of February.

The Exchequer opens eight Days before any Term begins, except Trinity, before which it opens but four Days.

Note, That the first and last Days of every Term are the first and last Days of Appearance.

The Laws, tho' various, speak themselves but one,
In ev'ry Nation the politic Sun;
It warms, and shews its Force, by various Heats,
And, tho' in Clouds sometimes, it never sets;
It saves the Just, beats down the lewdly Stout,
Nor can a Government be safe without.

January hath XXXI Days

Unbounded Time drives on th' unwearied Sun,
Who shines as strong as when he first begun;
How oft we have seen him rise, how oft retreat,
And full as oft we've seen his Glory set.
Yet still he's Sol, doth like himself appear,
Gives us his Heat, his Beams to ev'ry Star.

February hath XXVIII. Days.

Three of the seven did think well to chuse
 The Sign Aquary for their Rendezvous,
 And there they did oppose by Law Divine,
 The benevolent Jupiter in the royal Sign.
 Thus do they mix their Rays, thus do they move,
 And thus by them we're influenc'd from above.

March hath XXXI Days.

Saturn's no fighter, ueth no Sword nor Gun,
 What comes from him is by his Council done;
 By artful Arguments, and well plac'd Words,
 He works his Way, which they can't cut with Swords
 Let the Peace-maker prosper, let him know,
 The God of Peace, he will assist him too

April hath XXX Days.

See passive Jove how humble he is come,
 And for what Ends he compliments the Sun,
 Lazy and old, and covetous be sure,
 He wants, he wants, a fine fat Sinecure.
 But what doth Mars conjoin'd with Sibilon too,
 Two Repparees, two Traitors, two Coiners too.

June hath xxx Days.

When e'er you find (as now) the Sun and Mars
In Gemini, shew quarrels, civil Jars :
From such bad Beams unlucky Actions grew,
And now again (I fear) you'll find it true.
Why should not Jove and Jove's sown Train thus meet?
And why not London be the Seat of it?

July hath xxxi Days.

Did ever Mars and Mercury appear
In Cancer, but they play'd the Villain there?
Some private Mischief they'd contrive to do,
By Peij'ry, Libels, and by Coining too.
Sometimes by different Ways they speak aloud,
And move the Fury of the clamorous Croud.

If Conjunctions are Rays of Amity and Love,
What shall we judge from this of Sol and Jove?
Some welcome News the flowing Minutes bring
To a fam'd Throne, and a deserving King.
But Saturn's squint-eyed Aspect threatens too,
Some desp'rate Project by th' enraged Crew.

September hath xxx Days.

Thrice happy he, whom Fortune's flattering Wiles
 Doth not delude, when angry Tempests rise,
 Is not dismay'd, but can resist her Smiles
 With an undaunted Breast, her Frowns despise :
 Outdoes the proud Heroes of the Field,
 That ought to him the Prize of Fame to yield.

October hath xxxi Days.

Those Men who fly from Peace are too to blame,
 Who seek their own Harms, they deserve the same.
 And you whose Calms make Neighbours Storms seem
 Try you the Tide before you truit the Shore. [fore,
 Now Physick proper make sick Bodies found :
 So will Religion cleanse foul Error's Wound.

D	☉	☿	♊	♈	♉	♊	too slow	South	& sets	
1	23	□				Δ	10 36	8 34	Morn.	This Month affords us many benevolent Configurations. I need not doubt but we in England are now in a quiet and peaceable Condition in general, nor can I discover what may disturb us if we were but once resolved to agree among ourselves, & lay aside all needless Disputes and Controversies. Much Intelligence arrives this Month, and, amongst the rest, good News to our industrious Merchants. I say let us resolve to be faithful to ourselves, and we need not fear but to be happy; for Divisions and Factions are the Tortures of a Crown.

21 24

Here's a whole Croud of Rays come pressing in,
And Jove and Mars do both the Dance begin.
The Beams are different, act a different Way;
The Effects are various too, as well as they.
Yet tho' these Bodies move, and vary thus,
Th' Almighty God governs both them and us.

December hath xxxi Days.

As you value your Faith, Religion, and Laws,
 So stand by our King, and *Great-Britain's* Cause.
 If Liberty's good, and you'd live free from Harms,
 Trust no Dissenter's Oaths, but stand to your Arms.
 But if you think Presbytery and Knavery excels,
 Your Remedy's near—you know where it dwells.

N. B. In the Kalendar Part you will find the Planets South-
ing inferted to several Days in each Month; and by this
Table you may easily find their Rising and Setting: First
find the Longitude for the Day proposed, with which enter
this Table, and take out the Semidiurnal Arch thereof,
which being added to the Time of Southing, gives the
Setting, but substracted the Rising.

Of the Eclipses that will happen in the Year 1778.

WITHIN the circumference of this year, will happen three Eclipses; viz. two of the Sun, and one of the Moon: One of each luminary will be visible in our hemisphere; they happen in the following order, according to the calculations of my astronomical friend, Mr. Henry Andrews, Teacher of the Mathematics, at Royston, in Herts; by whom youth may be commendably boarded and taught all the parts of the mathematics. He also makes barometers and thermometers, and adjusts them to the greatest nicety and exactness.

The first is a visible eclipse of the Sun, on Midsummer-day, June 24, in 3 deg of Cancer in the afternoon; the penumbra first touches the earth's disk, and the Eclipse first begins in the Pacific Ocean, in 7 deg of north latitude, and 107 deg. and a $\frac{1}{2}$ of longitude, west from London. The Sun will be centrally and totally eclipsed at his rising on the same ocean, lat. 12 deg. and a $\frac{1}{2}$ north, and longit. 24 and a $\frac{1}{4}$ west; the central shadow directs it's course north eastward over the kingdom and Gulph of Mexico, Carolina, and Virginia, into the Atlantic Ocean, and thence to the south part of Newfoundland fishing-bank; where in the lat. $41^{\circ} 22'$ north, and $54^{\circ} 7'$ west longit. the Sun will appear totally eclipsed at noon day, for the space of 4 min. or more; from Newfoundland fishing-bank, the central and total shade, will take a south east course, passing the Atlantic to the Western Isles, &c. when in lat. 20 deg. and a $\frac{1}{2}$, and in longit. 21 deg. east, the central obscurity ends as the Sun sets, and in lat. 14 deg. and a $\frac{1}{2}$ north, and longit. 4 deg. east, the Moon's penumbra will quit the earth's disk, and the whole Eclipse ends at Sun-setting.

In this island of Great Britain, the time may be expected as follows, adapted to the meridian and latitude of London: The Eclipse begins at 42 min. past 3; the middle will be at 35 min. after 4; and the end will be at 26 min. past 5, apparent time. The Sun will be about half covered a little to the left on the lower limb.

The

P A R T R I D G E, 1778.

The second is a Lunar Eclipse, and visible, if clouds interpose not; it happens on Friday, the 4th of December, in the morning. The time and manner of it's appearance, may be expected to agree with the following calculation and construction:

The Eclipse begins at 25 min. past 4; the middle will be 37 min. past 5; and the end will be at 49 min. past 6, apparent time.

The third and last Eclipse of the Sun, on Friday the 18th day of December, about our 10 o'clock at night, and consequently invisible to us. It will be a great Eclipse in South America, for in the lat. 67 deg. south, and 151 deg. of west longit. from London, the Sun will be centrically eclipsed at noon-day; but this Eclipse will be no where total. I shall give my judgment of these visible Eclipses at the time when they happen.

Judicium Astrologicum for the Year 1778.

GO forth my book; what though thy foes do rage,
Justice and truth shall be thy patronage.
And though anonymous clandestinely
Doth thee affront, with patience pass it by:
Maugre his spight, and stand'rous ignorance,
A thousand strong thy conscience will advance:
Tell him the intrigues of states and kings
Are not thy work, thou mindest other things.
In th' Heavenly motions seek to gain more skill,
And meditate thy great Creator's will:
Whose will is just, and righteous are his ways,
Whoever he pulls down, or's pleas'd to raise.
To insult o'er the afflicted God mislikes,
And likewise him who's mindless why he strikes.
Do not retort 'gainst thy disguised foe,
His mistakes pardon, and so let him go.
But first acquaint him that thou dost retain
A milk-white spotless conscience in the main;
And warm'd with strong desires and fervent zeal
Towards God, the king, the church, and common weal.
Thy

P A R T R I D G E, 1778.

Thy yearly office, and thy harmless end,
Is to accomodate thy country friend.

I begin my judgment of the year 1778, from the ingress of the Sun in Capricorn, December the 21st, 1777, at 10 hours 20 min. in the forenoon, at which time the face of the Heaven in the meridian of London, is as followeth: Sagitary 6 deg. culminant, and Aquarius 8 deg. ascending; Saturn in 12 deg. in μ , Υ in 27 deg. of Ω , δ in the ascendent, in 10 deg. of Aquarius, and ζ in 7 deg. of Sagitary, and $\odot$ in 00 in Capricorn, and ☾ in 6 deg. and the Moon in 27 deg. of Virgo.

The position is in general violent, and so will the actions thence proceeding; for there is not one planet well placed in the whole scheme. The Moon she is applying to the $\square$ of the Sun, and the $\square$ of Mercury; these two stars have the great and sole government of the brain, and the faculties thence proceeding; for she governs the substantial part that is the body of the brain as matter, and Mercury governs the effluvioms, or actions of it, which is (in plain terms) the intellectual part of man. Now what can we expect should be the effects of this position? When the two governors of reason and sense are afflicted and fermented by the quartile ray of the Sun, why it is rational to believe and we may expect to hear of very notable transactions carried on by the greatest wits both of our own and our neighbour nations; and in the midst of all this action, (be it of what kind soever) some persons will be advanced, and others discarded, as being found guilty of high misdemeanors, and perhaps persons of no mean quality too.—The spirits of men seem about this time to be strangely exasperated, and they run themselves too voluntarily into no small troubles and vexations—and thus our peace is molested and disquieted, and thereby both the temporal and civil magistrate disturbed. Many elderly (or the more ancient sort of) people leave this world this quarter, and amongst the rest some persons of note both in England and some adjacent countries, also much robbery and thievery practised; for such configurations usually excite mankind

PARTRIDGE, 1778.

passion and revenge, by plotting and conspiracy, though to their own ruin and destruction. Indeed it is a season more fit for council than for action, yet some busy agent, viz. the friends to America will adventure (I fear) to wander out of the royal road of loyalty, and perhaps come home by weeping crosses. There is a storm approaching, and woe be to them on whom it falls. Notable discoveries this quarter break forth amongst us, and let none be too busy to fish in troubled waters. Audit, cerne, tace. —Matters and things of great importance are now under debate. Towards the latter end of February, viz. the 22d or 23d day thereof, Mars enters Aries, the reputed ascendent of England, and there continues till the 4th of April, and at the same time disposes of Saturn, the Americans signifier, in his own house Scorpio; hence then the English nation will take courage, and some noble heroic spirits appear active to good purpose, to promote the interest and safety of their king and country. God increase the number of such worthy heroes amongst us, that we may live in peace and plenty under the government and protection of our just laws and gracious King, whom God preserve.

Of the SPRING Quarter,

WHICH this year initiates according to my calculations, on Friday, March the 20th, at 8 minutes past noon; the Sun entering the Equinoctial sign Aries, or the earth into the opposite point Libra, making thereby the day and nights of equal length all over the world; at which time 28 deg. of Cancer ascends on the east, and 2 deg. of Aries is on the cusp of the med. cœli. Saturn is retrograde in Scorpio in the 5th, and Jupiter in ♎ in the 2d, in trine to Mars; and the Sun in the 10th in ♈. The Moon is in ♄, the domal dignities of Jupiter just departing from the trine of Jupiter and Mars, and applying to the square of Venus and the Sun. Now in this ingress Mars, the patron of England, is found strong and powerful in England's ascendant, viz. Aries, and accidentally posited in the medium cœli, the angle of honour, dignity, sovereignty,

P A R T R I D G E, 1778.

reignty, and dominion; there ballancing the Heavens, as it were, according to his desire, will and pleasure, intimating a more than ordinary activity in the genius or spirit of the English nation, not only inclining, but prompting them to high and eminent engagements with our foreign people, and promising unto them, victory and conquests over their enemies, or such as shall contend against them, giving them a sufficiency of power to prescribe laws and limits to them.

The Sun we find posited in the 10th house, just entering his exaltation, he is the significator of Emperors, Kings, Princes, &c. and by his position there intimates their safety and quiet, and that they shall (this year) live free from the stings of a waspish and disappointed people, or else without much trouble to themselves, pull out the stings of those that are enemies to just government. Bethem says, Aphor. 15, A planet in his house or exaltation, is a man in his own castle or strong hold, not subject to molestation or controul, and this will be the condition of great persons this year.

Haly goes further, and says, Si Sol fuerit decimâ ornabuntur reges et clari fient, et max Rex illius climatis, &c. If the Sun, saith he, in any revolution shall be posited in the Mid-heaven, or angle of sovereignty, he declares that kings and great persons to be had in honour and admiration, and to be obeyed of their subjects and servants: It likewise intimates their great indulgences to and care of their people, so that you see the vulgar will not be obedient for nought, their loyalty is likely to be rewarded. Nobility and virtue will increase and flourish, and receive great encouragement from all kind of persons. Government in itself, be it either of church or state, will be of greater honour and estimation, and be held more venerable, than for some years last past it hath, and majesty and sovereignty (as far as just) shall be exalted; the worms and maggots of treachery, that have a long time troubled the brains of men in this nation, are probably like to be ejected, and madness and frenzy they have drove
many

P A R T R I D G E, 1778.

many into, will abate, without their taking a journey to Antyciras, or using the help of helebore.

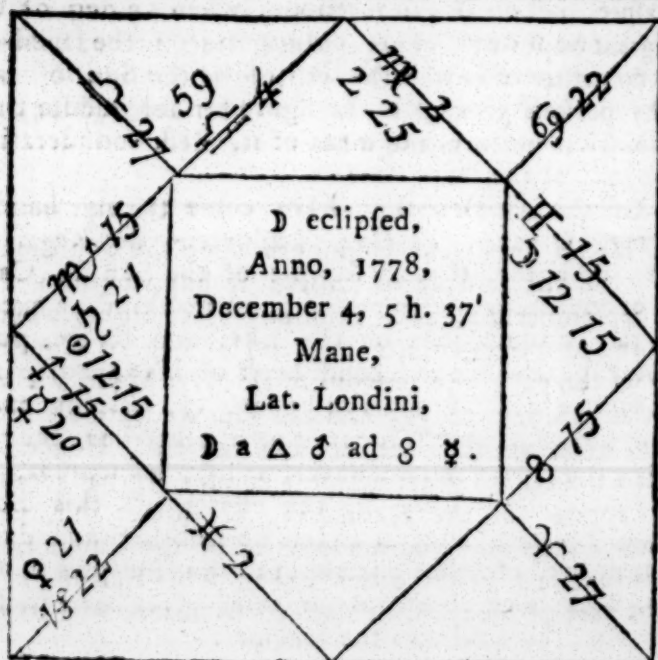

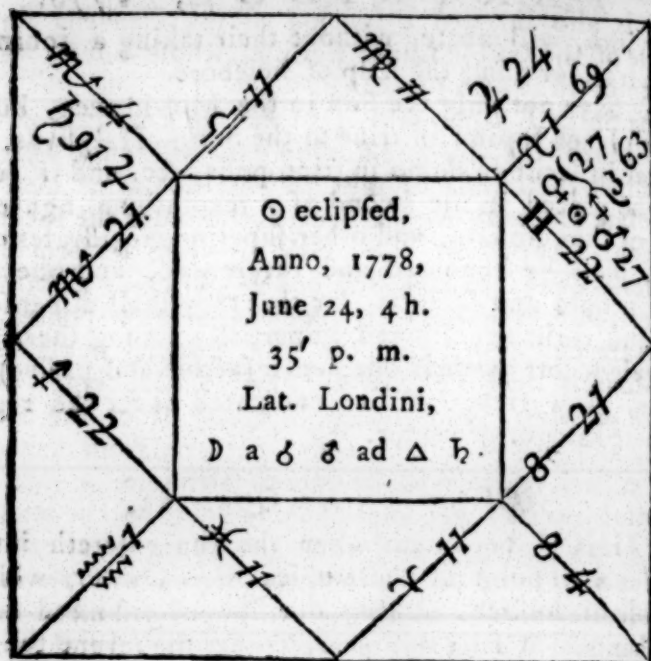

We have not only the Sun in the Mid-heaven, but the noble planet Jupiter in trine to the Sun. Haly says, At si Jupiter in secundâ domo in trino polis, &c. and if Jupiter shall be placed in the second of a revolutional figure, the king of that climate, and other superior magistrates of the same, shall be honoured and revered, and obeyed of their people and subjects, for that they shall dispense justice and right equally and impartially among them; and the vulgar sort by their obedience (active and passive) shall thrive, grow rich, and live contented under the regency of their king or governor.

Of the SUMMER QUARTER,

WHICH beginneth when the Sun entereth into the first point of the tropical sign Cancer, which is the estival solstice, making our longest days and shortest nights; which falls this year, on Sunday, June the 21st, at 20 min. past 10 in the forenoon, when 13 deg. of Virgo ascends, and 6 deg. of II culminates on the med-coeli, but because there is a visible Eclipse of the Sun so near the ingress. I shall give you the figure for the middle time of the Eclipse, and my judgment of it, with consideration to the ingress at the same time.

All the textuaries that have come to my hand, as Ptolemy, Cardan, Proclus, Ludovicus de Regis, and others, do agree, that an Eclipse of the Sun in Cancer, doth undoubtedly presage damage to mankind by excess of wet, rain, inundations or the like, and to this purpose Ptolemy speaks in the second book of his Quadripartite: *Quæ figuræ si fuerint marinæ ut ☿, ♃, delphis marinis piscibus, classibusque insuper et navigationibus, that if the the sign it happens in be Cancer, it signifies sea-fish, ships, and sailors shall suffer by the effects of this Eclipse. Quando Eclipses fiunt in aqueis ob imbrum abundantiam et sterilitates, et pestes portendunt, that Eclipses in watery signs, because of abundance of rain, gives barrenness and pestilence; here follows the scheme :*

PARTRIDGE, 1778.

P A R T R I D G E, 1778.

Here is also inserted a scheme of the Heavens for the middle of the visible Lunar Eclipse, whose effects will be spoken of in it's proper place.

The Solar Eclipse falling in the first decanate of Cancer, disturbs the air, and stirs up various strange weather; it inclines the minds of men to war, and arms, &c. and to violate national leagues deceitfully under the species of religion. At present, some may urge non performance of articles—Venus in the 8th house—*Alicujus nobilissimæ mulieris mortem denunciat.* Venus, as now posited, declares the death of some more than ordinary noble lady; the Moon is near the fixed star, called Aldeberan, of the nature of Mars; and is also departing from the body of Mars, and going to the trine of Saturn; from hence we may collect, there will be many skirmishes at sea with doubtful success; yet some of those fights will be managed with great gallantry and courage—Many piratical ships are likely to infest the sea towards the coasts of Spain and the Mediterranean, to the great impoverishment of the merchants. We have observed, that the several benevolent aspects of the inferior Planets in most months always give great hopes of a general peace, but, indeed, their aspects do rather manifest the willing inclination of many worthy persons to assist in such a charitable action, than any ability to perform the matter intended.

Of the AUTUMNAL OF HARVEST QUARTER.

WHICH this year beginneth when the Sun toucheth the first scruple of Libra; it happeneth on Tuesday, September 22, at 51 min. past 11 at night, when the latter end of Pisces culminates, and 25 deg. of Cancer ascends on the east; the preventional New Moon was celebrated in 28 deg. of ♊ , and the Planets were all subterranean, even as they are at this ingress. Hence I say, here is a time of no great action; sundry Ambassadors and agents appear for the reconciling of former differences; and now I shall give you my opinion of the Lunar Eclipse that is specified in the other page: This Eclipse is in a violent part of Heaven, it's effects therefore will be great
and

P A R T R I D G E, 1778.

and famous; Proclus says, "When the Moon shall be eclipsed about the middle of Gemini, it portends the incursions of enemies, many rapines and cruelties, much cheating, and many fraudulent negotiations, violent petitions as it were commanding of justice; many Ambassadors from one king or prince to another, and many letter-missive much employment for all scribes and secretaries." And in this Eclipse England is very much concerned, in that it happens in the ascendent of London, the metropolitan city thereof; it adviseth to great caution in every respect, chiefly in securing the public peace; for although London have (deservedly) the reputation among all the experienced persons of the world, for the best and most orderly governed city in the universe, yet, will it, at this time, need her magistrates and ministers of justice to be vigilant and active, chiefly in guarding against the incroachments of power, and in the suppressing and keeping under obstinate spirits (let their opinions and pretences be what they please) who will now be apt and ready to distain her honour and bring a cloud upon her splendid reputation.

And so I have finished my this year's performances with saying, that I hope the world will appear in a more settled condition than formerly, towards the latter end of this year, 1778. God defend his Majesty and all his kingdoms and dominions, and let his weighty affairs and all his just undertakings be prosperous this year and ever.

Posteti Casus providendi.

STOP here my muse, and make a modest pause,
And mark who 'tis that would evade the laws;
Then blame all those that would disturbance raise,
And make divisions in these peaceful days:
Untbounded malice with revenge is sweet,
If with fit objects it so chance to meet.
